

Map your space as a place for all.

Build accessible indoor maps that make your space safer, easier to navigate, and more inclusive for everyone.

Independently audited, not self-assessed

Mappedin is independently audited by Level Access against WCAG 2.2 Level A and AA. A VPAT is available on request.

Accessibility strategy that creates an experience advantage.

Accessibility shouldn't be an afterthought. Mappedin builds it into the core of the platform, not as a compliance checkbox added at the end. The goal is to remove barriers, reduce friction, and drive better experiences, so anyone can navigate your venue independently and with confidence. That same foundation extends across every touchpoint, turning accessibility from a legal requirement into a genuine advantage in how visitors experience your space. It's the difference between meeting a standard and setting one.

One platform, every channel

The same accessible map data powers your website, mobile app, kiosks, and digital signage.

Independence for every visitor

Routes and maps adapt to individual needs, replacing one-size-fits-all directional signs.

Built for international standards

Move toward your international compliance obligations without starting from scratch.

Inclusive by design

Inclusivity principles integrated at every stage of development, for every ability.

Real product validation

Testing of the software is performed by professionals with lived experience.

Strong technical foundations

Clear labels make it easier for people and assistive technologies to interpret.

// "By actively testing the solution (Mappedin) and gathering feedback from the community, Frasers Property is taking meaningful steps toward co-creating a more inclusive wayfinding system. Involving users directly in the process is an important move to ensure the solution truly reflects real needs and experiences."

Josh Tseng,

Inclusive Design Consultant, Blind Mice Media (for Frasers Property, a multinational real estate company)
